

MINERAL OIL

We have been asked to provide a declaration that our Candesce® contains less than 1% mineral oil. We do not add mineral oil during production; however, we do not test the final product for it. However, “less than 1% content” equates to approximately 2#/ton. Therefore, we feel we can safely state that we comply with less than 1% without testing. Industry concern for mineral oil content generally stems from recycled paperboard. In this stream, mineral oil is introduced by printing ink contamination of the recycled fiber.
